Welding and Allied Processes

ИСТОРИЯ РАЗВИ

Nikolay Nikolayevich Benardos

(Russian: Николáй Николáевич
Бенардóс)

(1842–1905)

was a Russian inventor of Greek origin who in 1881 introduced carbon arc welding, which was the first practical arc welding method.

https://en.wikipedia.org/wiki/Nikolay_Benardos

неплавящимся угольным электродом

**Nikolay Gavrilovich
Slavyanov**
(Russian: Николáй Гаврíлович
Славянов:
(5 May 1854 – 17 October 1897)
was a Russian inventor who
in 1888 introduced arc
welding with consumable
metal electrodes,
or shielded metal arc
welding, the second
historical arc welding
method after carbon arc
welding invented earlier
by Nikolay Benardos.

Professor Evgeny Oscarovich Paton

(Russian: Евгений Оскарович Патон)
(1870–1953)

was a Russian and Soviet engineer who established the E. O. Paton Electric Welding Institute in Kiev. Paton was a people's deputy of the Supreme Soviet of the Soviet Union (1946–1953). He was the father of Borys Paton.

Borys Yevhenovych Paton

(Ukrainian: Борис Євгенович Патон)
(born November 27, 1918)

is the long-term chairman of the National Academy of Sciences of Ukraine. He was appointed to this post in 1962. Paton was re-appointed for another term in office in 2015.

Paton Bridge across the Dnieper in Kiev, Ukraine

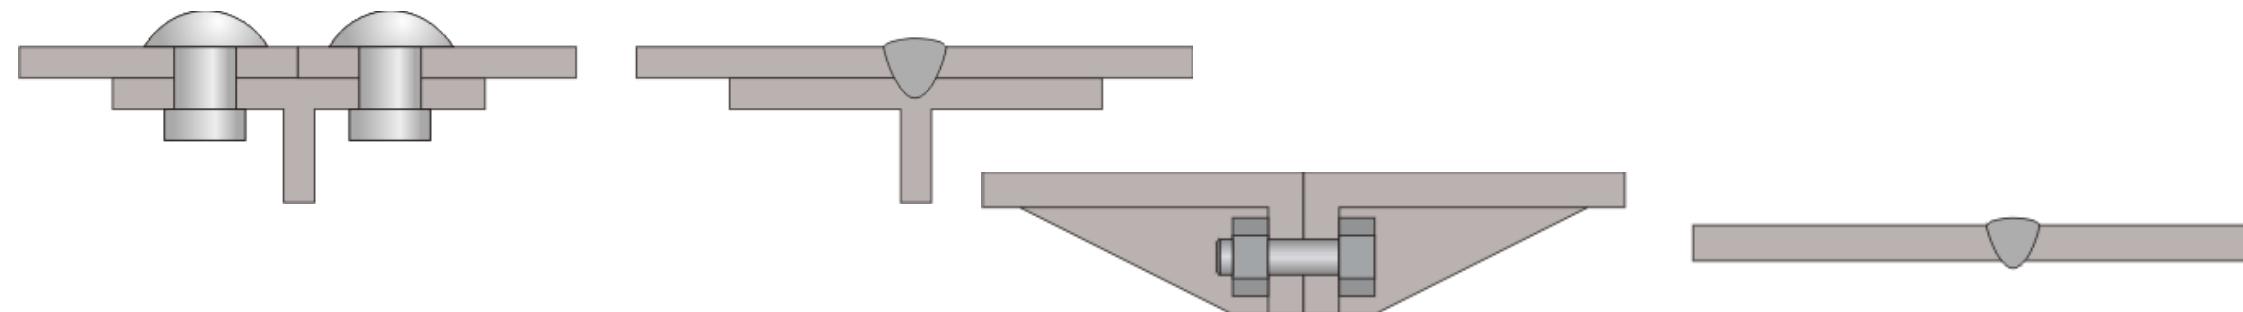

Paton Bridge is one of the bridges across the [Dnieper in Kiev, Ukraine](#) named after its constructor [Evgeny Paton](#). Built between 1941 and 1953, it is the world's first all-welded bridge and is also the longest bridge in Kiev having a length of 1,543 metres (5,062 ft).

https://en.wikipedia.org/wiki/Maurzyce_Bridge

Advantages of welding as compared with riveting and bolting

1. Welding enables weight and material savings.
2. Welding is easier to mechanized.
3. Welded joints are easy to renew. Parts with loose rivets need to be replaced, but welded parts can be repaired by welding.
4. Welded joint can be stronger than the parent materials; if a filler material is used that has strength properties superior to those of the parents, and proper welding techniques are used.
5. Welding is not restricted to the factory environment. Portable welding machine equipments are available, so portability of welding machine can be avoided. It can be accomplished in the field.
6. Welding is usually the most economical way to join components in terms of capital and equipment operating costs.

...and disadvantages of welding as compared with riveting and bolting

- 1. The biggest one is that welds often contain defects.** Welding requires much more hands-on oversight than other methods, and much stricter manufacturing controls. Some weld defects are difficult to detect. This requires special methods like X-raying to control quality. So in practice welding is less reliable, less predictable than other methods.
- 2. Welding of very thin sheets is difficult,** in some situation rivets or screws are more cost-effective for thin sheet metal.
- 3. Welding creates a permanent joint,** not desirable if parts need to be fixed or replaced later.
- 4. Most welding operations are performed manually** and are expensive in terms of labour cost.
- 5. Most welding processes, involving the use of high energy,** are inherently dangerous.

2.1 Terms related to welding and allied processes

2.1.1 General terms

2.1.1.1

welding

joining process in which two or more parts are united producing a continuity in the nature of the workpiece material(s) by means of heat or pressure or both, and with or without the use of **filler material** (2.1.10.4)

Note 1 to entry: Welding processes may be used also for **surfacing** (2.1.9.1) and remelting.

2.1.1.2

fusion welding

welding (2.1.1.1) involving localized melting without the application of external force in which the fusion surface(s) has (have) to be melted with or without addition of **filler material** (2.1.10.4)

2.1.1.3

weld

result of **welding** (2.1.1.1)

Note 1 to entry: The weld includes the **weld metal** (2.1.2.1) and the **heat-affected zone** (2.1.2.2).

2.1.1.1 welding

joining process in which two or more parts are united producing a continuity in the nature of the workpiece material(s) by means of heat or pressure or both, and with or without the use of **filler material** (2.1.10.4)

Note 1 to entry: Welding processes may be used also for **surfacing** (2.1.9.1) and remelting.

2.1.1.3 weld

result of **welding** (2.1.1.1)

Note 1 to entry: The weld includes the **weld metal** (2.1.2.1) and the **heat-affected zone** (2.1.2.2).

2.1.1.4 weldment

assembly incorporating one or more **welded joint(s)** (2.1.4.2)

2.1.4.2 welded joint

assembly that is produced by **welding** (2.1.1.1) together two or more parts

**3 Terms and definitions**

For the purposes of this International Standard, the following terms and definitions apply.

3.1**joint**

the junction of workpieces or the edges of workpieces that are to be joined or have been joined

3.2**fusion welding**

welding involving localized melting without the application of external force in which the fusion surface(s) has (have) to be melted

Note 1 to entry: filler metal may or may not be added.

3.3**welding using pressure**

welding in which sufficient external force is applied to cause more or less plastic deformation of both the contact surfaces, generally without the addition of filler metal

Note 1 to entry: The faying surfaces may be heated to permit or facilitate joining.

[SOURCE: ISO 857-1]

3.4**faying surface**

surface of one component that is intended to be in contact with a surface of another component to form a joint

3.5**partial penetration**

penetration that is intentionally not full penetration

3.6**incomplete penetration**

penetration that is less than that required or specified

3.7**butt joint**

type of joint where the parts lie approximately in the same plane and abut against one another

Figures

3.2 fusion welding

welding involving localized melting without the application of external force in which the fusion surface(s) has (have) to be melted

Note 1 to entry: filler metal may or may not be added.

3.3 welding using pressure

welding in which sufficient external force is applied to cause more or less plastic deformation of both the contact surfaces, generally without the addition of filler metal

Note 1 to entry: The faying surfaces may be heated to permit or facilitate joining.

[SOURCE: ISO 857-1]

3.2

сварка плавлением: Сварка, осуществляемая оплавлением сопрягаемых поверхностей без приложения внешней силы, обычно, но необязательно, добавляется расплавленный присадочный металл.

3.3

сварка давлением: Сварка, осуществляемая приложением внешней силы и сопровождаемая пластическим деформированием сопрягаемых поверхностей, обычно без присадочного металла.

П р и м е ч а н и е — Сопрягаемые поверхности допускается нагревать, чтобы облегчить получение соединения (ИСО 857-1).

3.2

fusion welding

welding involving localized melting without the application of external force in which the fusion surface(s) has (have) to be melted

NOTE Filler metal may or may not be added

3.3

welding using pressure

welding in which sufficient external force is applied to cause more or less plastic deformation of both the contact surfaces, generally without the addition of filler metal

NOTE The faying surfaces may be heated to permit or facilitate joining.

[ISO 857-1]

welding. A joining process producing coalescence of materials by heating them to the welding temperature, with or without the application of pressure or by the application of pressure alone, and with or without the use of filler metal.

See Figures A.1 and A.3 through A.5.
